PROFILE

Systems and automation builder at a UK construction contractor. I replaced the company's paid ERP with a job management system I specified, tested and rolled out using AI coding tools – it is now used daily by the whole team, from the office to site crews on tablets. I build AI workflows with a human sign-off on every change, and I understand the business underneath them from 650+ estimates and running daily operations. Four hackathon awards, including Best Use of Gemma 4 (Manchester, Oct 2026).

ERP replaced	**650+**	**4 awards**	**1,100+**
own system, live, whole team	estimates produced	across 3 hackathons	automated tests

CORE SKILLS

AI & automation: LLM workflows (Claude, Gemini / Gemma), MCP servers and tool use, human-in-the-loop approvals, prompt design, API integrations with business software

Business systems: ERP implementation and custom development, data migration, requirements and specs, user testing, go-live and staff training

Technical: TypeScript / Node.js, Python scripting, SQL databases, Git, Android, automated testing – built with AI coding tools; I design, test and own the systems

Commercial & operations: Estimating from drawings, tender preparation, cost and margin analysis, supplier negotiation, invoicing, cash flow, scheduling field crews and vehicles, advanced Excel / Google Sheets

3D & design: 3D modelling and CAD (Fusion 360 incl. Python API, OpenSCAD, SketchUp, Blender), 3D printing and product design, technical drawing

EXPERIENCE

UK construction contractor 2025 – Present

Estimator, Operations Coordinator & Systems Builder – now covering whatever the business needs, including all of its systems.

Systems & automation

- Replaced the company's paid ERP with a job management system I specified, tested and rolled out using AI coding tools: enquiry-to-invoice stages, crew planning, invoicing, and an offline Android tablet app for site crews. **Live and used daily by office and site teams; ERP subscription cancelled.**
- Migrated the full job history out of the old system with a read-only exporter and importer, and set up the hosting, backups and updates.
- Owned quality and rollout: 1,100+ automated tests, testing on real tablets, the go-live and staff training.
- Built an AI connector so an assistant can work inside the job system: each person has their own key that can be switched off, the assistant asks before any change, and every change is logged under that person's name.
- Automated office admin with AI workflows: supplier bills into accounts (details worked out from past bills, approved before entry), new enquiries into jobs and project folders, and email triage – saving several hours of admin every week.
- Before the replacement, implemented and developed the company's ERP from scratch: pipeline stages, custom fields and views, automations and reports.

Estimating & operations

- Produced 650+ estimates from architectural drawings and site surveys, signing off every submission independently.
- Ran job scheduling, dispatch, payments and client communication day to day; also designed bespoke layouts for each site.
- Tracked field staff and vehicles daily with purpose-built spreadsheet dashboards.
- Kept the business running for a week while senior management were away: managed the site crews, scheduling and the office.
- Ran invoicing and job paperwork, plus staff hours for payroll, bank reconciliation, cash flow and supplier payments.
- Produced 3D visualisations and construction sequences (SketchUp, Blender) and 3D-printed replacement parts for site equipment.

PROJECTS & AWARDS

- **dissPICable – Best Use of Gemma 4**, Hacktoberfest Hack Day Manchester (Oct 2026). Team of three; I picked the idea and led the build: photo-to-character AI rap battle with live crowd voting. Node.js, Gemma 4 (multimodal), ElevenLabs.
- **AI Beat Studio – Best Use of OpenLoft + Applied AI Society Bradford Award**, Bradford Agentic AI Hackathon (Oct 2026). AI music producer desktop app plus an Android pad controller. Electron, Gemma 4, WebSocket, Kotlin.

- **Tameside Hackathon – Winner** (competitive technology problem-solving event).
- **KN Layerworks** – personalised 3D-print shop with order automation: customer text in, ready-to-print multi-colour files, packing sheet and reply out. Python, OpenSCAD.
- **On Track** – native Android routine app in daily use: Bluetooth smart-scale weigh-ins, barcode food logging, recipe scheduler. Kotlin, Jetpack Compose.

EARLIER EXPERIENCE

Architecture Student (Year 1) – Newcastle University 2023 – 2024

Spatial design, technical drawing and building structures; left the five-year route for a faster way into industry, applying drawing knowledge directly in estimating.

Founder & Product Designer – self-employed 3D printing business 2021 – 2022

Started at 16: designed, made and sold my own VR headset spacers – CAD, production, pricing, listings and fulfilment.

Crew Member – McDonald's 2024 – 2025

Kiosk Worker – Etihad Stadium 2022 – 2023

EDUCATION

BA Architecture (Year 1) – Newcastle University, 2023–2024
A Levels – Core Maths A, 3D Design A, Criminology C; BTEC Digital Games Production D*
GCSEs – 10 at grades 6–9, including Maths 9 and Computer Science 7

INTERESTS

Building AI tools and games, bouldering, padel, tennis, football, cold-water swimming, travelling.
